Evaluating our Energy Use

▸ Guelph Hydro monitors how much electrical energy we use

▸ We are billed by how much we use

▸ Of course, the less we use, the lower our bill!

▸ Use energy wisely by:

    #1 – unplug chargers when done.

    #2 – Use 'sleep' or 'energy saver' modes

    #3 – Turn lights off!

    #4 - Do full loads of laundry

    #5 – Use CFL lightbulbs

    #6 – Try a slightly warmer house in summer

        AND

a slightly cooler house in winter.

The amount of energy we use is measured in kilowatt hours (kW·h).

The more kilowatt hours we use, the higher our electricity bill!

A kilowatt hour costs between 6 cents and 12 cents to use. There are times of day in which energy is cheaper.

Cheaper energy times:

- Early morning
- After supper
- All weekend
    Try to use electricity at these times if possible!
