

Global Impacts of Climate Change

The movie '6 Degrees' covered a lot of the major changes we could see in the world if global warming continues.

IPCC -

Formed in year _____

These scientists have identified 4 areas of most concern:

1).....

2)

3)

4)

Arctic Hard Hit. Arctic Changes affects the WHOLE world!

Albedo Affect →	Ocean currents →
CO ₂ Release →	Biodiversity →
Sea level rise →	Changes in shipping →

Map of the World – Possible Global Impacts

Use the global map in your text (chapter 10.2) and record 3-4 specific examples linked to a specific geographic areas. You will be expected to write short answer paragraph responses and it is necessary that you include specific examples. It is NOT ENOUGH to say that ecosystems will be damaged. A strong answer will explain which ecosystems will be affected, where they are and why they will be affected.
