

## Other Objects in the Solar System

- |                         |                                                                    |
|-------------------------|--------------------------------------------------------------------|
| _____ Satellite         | A A rock floating in deep space                                    |
| _____ Natural satellite | B Small rock/dust that is falling towards earth                    |
| _____ asteroid          | C Anything that orbits (circles) a planet ie: GPS                  |
| _____ Asteroid belt     | D A place between that has lots of rocks floating in space         |
| _____ comet             | E A meteor that burns up as it enters our atmosphere               |
| _____ Comet tail        | F A natural object that orbits (circles) a planet ie: the moon     |
| _____ meteor            | G Frozen ball of ice                                               |
| _____ Shooting star     | H The frozen ball melts from the sun and leaves a 'tail' of steam. |

Why did the dinosaurs die?
