

Sources of Light (11.2)

Nuclear Fusion - Hydrogen atoms fuse together and emit (give off) light ie: _____

Incandescence - When they are very hot, some items give off light. ie: _____

Electric Discharge - electricity passing through a gas produces light ie: _____

Flourescence - some chemicals emit light while they are exposed to ultraviolet light. ie: _____

- Safety tip →

Phosphorescence - glow in the dark! Some chemicals emit light for a while after they are exposed to ultraviolet light. ie: _____

Bioluminescence - light emitted by living things!

Chemiluminescence - light emitted from a chemical reaction.
