

Animal Tissues

A collection of similar cells that _____ are called a tissue.

Animals, including us, only have 4 major tissue types: epithelial, connective, muscle and nerve

Tissue	Example	Definition	Main function
Epithelial			
Connective			
Muscle			
Nerve			

Organ Systems

All cells within our body need to

- Get nutrients
- Get rid of waste

Organisms need to

- Move
- Reproduce
- Respond to the environment
- Grow

Organ systems enable living things to accomplish all these necessary tasks.

- Musculoskeletal system, reproductive system, respiratory system, circulatory system, urinary system, nervous system, digestive system etc.
